5G
Are you really prepared?

5 TIPS FOR 5G READINESS

1 AUDIT
your network infrastructure
(Is your DAS 5G capable? Can you support multi-gig devices?)

2 RESET
goals based on 5G capabilities and aligned with your digital transformation strategies

3 DEAL
with the data deluge

4 PREPARE
for lightning fast speed and augmented reality

5 STRENGTHEN
cybersecurity protocols preparing for IoT and mobility at 5G speeds

MetTel 5G Services

SINGLE ACCESS TO 5G
As a multi-carrier mobile provider, MetTel can extend multiple 5G footprints on a mix of carriers to customers, but still manage speed and security under one network and bill.

IOT & MOBILITY CONSULTING
MetTel can assess the impact of 5G on wireless environments and industry applications and advise on the best strategy.

EXTEND 5G SERVICES INDOORS
Deploy a new software-defined local area network (SD-LAN) with fiber that supports 5G indoors where higher frequency radio signals will not penetrate or leverage the existing copper LAN using VLAN.

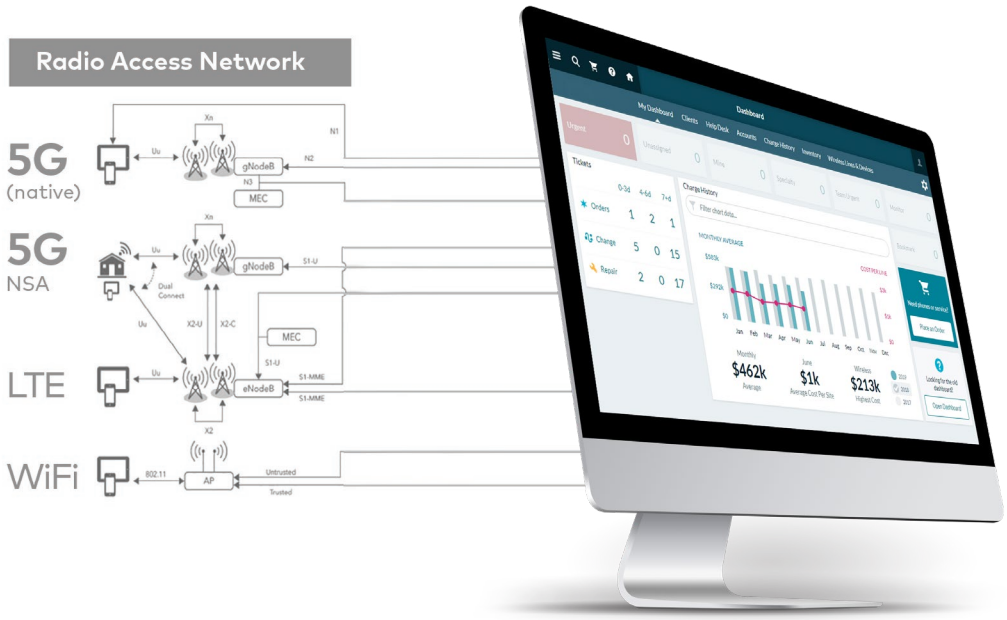
COMPLETE NETWORK MANAGEMENT
The MetTel Portal, a cloud-based communications management platform, provides complete transparency into all communications networks and uses AI to optimize network performance and costs.

5G CONSULTING
Specific recommendations for 5G availability, by network and carrier, as geographies and physical sites become 5G ready, without enterprise needing to enter into multiple carrier agreements.

PRIVATE CLOUD FOR MOBILITY
Using its direct private data connections to the wireless carriers, MetTel can secure and filter application use of 5G networks to limit security breaches and network misuse, as speeds go up 10x-100x.

MANAGED MOBILITY SUITE
MetTel can be the single point of 5G-capable device procurement, activation and ongoing management across carriers with our fully automated process.

SD-WAN
Edge computing solutions such as SD-WAN and virtualization amplify communication resources to deliver processing power and business insight.



Is 5G Really the Best Fit?

As an independent managed service provider, MetTel can separate the hype from the reality and help enterprises select the right 5G strategy—or decide if 5G is really necessary at all.
