On-Site Secure

Business Benefits

- Improve threat prevention by proactively identifying malicious attempts to damage your network
- Streamline security network deployment
- Reduce end-user downtime and response times to incidents
- Decrease security operation costs
- Eliminate unwanted applications to reduce your threat footprint
- Increase visibility and control over your network

On-Site Secure: Align Security with your Business Initiatives

Consolidated Communications, Inc. (CCI) On-Site Secure prevents an ever-growing list of innovative attacks from affecting your business, allowing IT resources to stay focused on strategic initiatives and ensuring increased productivity, cost savings, and a reputation of impenetrable security.

On-Site Secure is a fully managed security platform that operates on industry-leading technology and uniquely integrates next-generation firewall capabilities, advanced endpoint protection, and threat intelligence.

CCI assures the most enhanced level of network protection, proactively guarding companies of all sizes from system intrusions and security threats that put critical applications and data at risk.

On-Site Secure

CCI assures the most enhanced level of network protection, proactively guarding companies of all sizes from system intrusions and security threats that put critical applications and data at risk.

On-Site Secure Core Features

The core features of On-Site Secure are built on four subscription packages, all of which work together to safely enable applications and users while preventing threats from impacting business continuity:

Threat Prevention incorporates intrusion prevention services, network anti-malware protection, and command-and-control protections to defend against known threats.

URL Filtering protects against malicious sites and encrypted web traffic while offering granular customizable policy-based control over web activity.

WildFire™ discovers and automatically distributes protections against the latest threats with its cloud-based malware analysis environment, residing on the world's largest global threat intelligence network.

GlobalProtect™ network security client for endpoints keeps you protected from wherever you are accessing your network on any device.

Security Design provides a comprehensive security review combining key business objectives with security strategy and gap analysis, producing a detailed assessment report that springboards your customized On-Site Secure design.
