Cloud Wifi

cloud wifi

Cloud Wifi lets users access your network securely via local wireless access points and a centrally hosted controller.

Cloud Wifi: a Powerful, Hassle-Free Cloud Network

With a growing reliance on mobile devices and emerging applications, many organizations struggle to provide an effective wireless network for employees, vendors and guests. Consolidated Communications, Inc. (CCI) Cloud Wifi is a secure, effective, accessible solution. Its robust features enable complete control over devices, users and applications without adding cost or complexity.

Maximize Resources & Reduce Costs

While BYOD (bring your own device) can be a headache to manage, allowing employees to use their own devices increases user satisfaction, collaboration and productivity. Cloud Wifi lets users access your network via local wireless access points and a centrally hosted controller. All of these devices are fully managed by CCI, eliminating the burden of managing devices and saving IT time and resources.

BYOD use in the office means greater productivity & savings

89% of employees' mobile devices connect to corporate networks.

65% of companies allow personal devices to connect to corporate networks.

78% of companies report twice as many BYODs connect than two years ago.

88% of American small businesses already embrace BYOD.

Flexible Guest Access Improves the Customer Experience

Cloud Wifi provides customers and guests with the connectivity and flexibility they need. Administrative tools allow for full management and provisioning of guest accounts with appropriate access based on the individual's role.

Cisco Master Cloud Builder Partner

Secure Mobile Access

With the increased use of mobile devices, the need to secure those devices is greater than ever. CCI offers a secure, PCI and HIPAA compliant architecture and fault tolerant design that preserves local network functionality during WAN outages. Cloud Wifi is field proven in high security and mission critical network applications.

Easy-to-Navigate Dashboard & Management Tools

Cloud Wifi is a feature-rich, scalable, centrally managed solution that lets your business take full advantage of wireless technologies and applications without in-house wireless expertise. At the same time a web-based dashboard provides easy oversight of the entire system and integrated on-demand tools provide instant analysis of performance, connectivity, and more.

- Visibility and control of your entire network: wireless, switching, and security appliances, via a single dashboard
- Built-in multi-site network management tools and automated network monitoring and alerts
- Highly available and secure PCI/HIPAA compliant access points with custom permission and usage reports
