SD-WAN Enabling the Network Transformation

The network required to drive innovation into the future needs to transform today. **SD-WAN has become that path to the future** for: Cloud, IT infrastructure, branch connectivity, application support, AI, IoT, and more.

The need for
BUSINESS INNOVATION

58% of CIOS say that "helping in business innovation" is a core expectation of the IT organization.

–Deloitte CIO Survey, September 2018

By 2028, computing and **advanced AI and analytics** capabilities will expand capabilities of edge devices.

–Gartner, September 2018

A shift to
HYBRID CLOUD

$1.3 trillion in IT spending will be directly or indirectly affected by the shift to cloud by 2022.

–Gartner, September 2018

Companies are realizing that going all public cloud, private cloud, or data center isn't the best option. Sometimes they need a mix of all or both.

–Futurum, September 2018

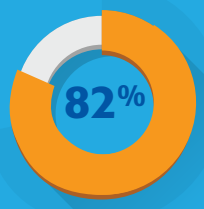
An end to
BRANCH ROUTERS

69% say they will replace branch routers with an SD-WAN appliance.

–Frost & Sullivan, August 2018

Telecom Virtual Network Functions (VNF) revenues to reach **$16.4 billion** in 2022.

–IDC, September 2018



About 82% of enterprises have a **multi-cloud strategy**.

–RightScale 2018, State of the Cloud Report

VeloCloud, now part of VMware, provides cloud-delivered SD-WAN, transforming WAN networking by optimizing network traffic such as voice, video and data across all transport options including private, broadband Internet, and LTE links. Built from the ground up to support cloud applications, and cloud services. SD-WAN by VeloCloud enables simplified access to the cloud and its benefits, automates branch deployments for customers of all sizes, shortens time to market, and delivers on exceptional user experience with unprecedented network visibility and proactive troubleshooting capabilities. For more information, visit www.velocloud.com and follow the company on Twitter @VeloCloud, LinkedIn, Facebook, and Instagram.
