Is a Cloud Phone System **Right for Your Business?**

If you...

HAVE A RELIABLE INTERNET SERVICE PROVIDER (ISP)
The key to high-quality voice and video communication with a hosted solution is solid internet. Use our free network readiness test to measure your network performance!

HAVE MULTIPLE, ON-GOING PROJECTS THAT LIMIT YOUR BUDGET
Cloud phone systems offer an OpEx spending model that allows you to utilize hosted communications without upfront investment, making them a great fit for SMBs.

DON'T HAVE A LARGE, DEDICATED IT STAFF
Maintenance and updates for cloud phone systems are handled by the vendor, which frees up your IT team to focus on other projects and customers.

HAVE REMOTE WORKERS OR MULTIPLE OFFICES
A hosted phone system allows remote employees and employees at other office locations to communicate across the same solution, with access to the same features.

ARE CONCERNED WITH SCALING YOUR PHONE SYSTEM UP OR DOWN
As the needs of your business change, a cloud solution can scale up or down to support more or less users – giving you more control over seasonal changes and the flexibility to grow seamlessly!

MAKING THE SWITCH TO A HOSTED SOLUTION:

1

Review your contracts and determine a feasible date to move to a new solution and avoid paying extra fees.

2

Check your number portability to ensure your current phone numbers or DIDs are portable before cancelling your service.

3

Create a paper trail when you're cancelling your service by sending an email and making a phone call to your current vendor.

4

Evaluate your business needs and current set-up – it's important to know your current technical environment in and out.

5

Ask for demos and **check out free trials** from multiple vendors to determine which solution is the best fit for your business.
